

CALIFORNIA FIREARM VIOLENCE RESEARCH CENTER, UC DAVIS HEALTH · JANUARY 2023

Concerns About Violence Within Social Networks

Results from the 2020 California Safety and Wellbeing Survey (CSaWS)

1 in 5

respondents (22%) reported
knowing someone at perceived
risk of hurting others or
themselves.

The question we asked

We asked California adults, "Are you concerned that anyone you know might physically hurt [another person/themselves] on purpose?"

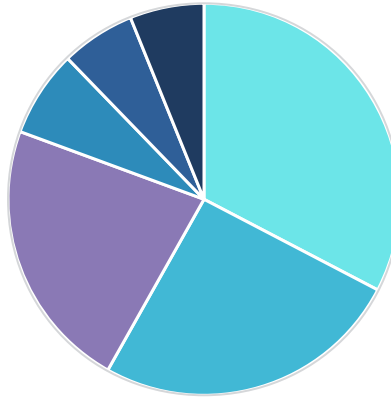

Persons at perceived risk of other-directed violence

How respondents described the person they were worried about.

32% friends

74% male

26% are 40-49 years old

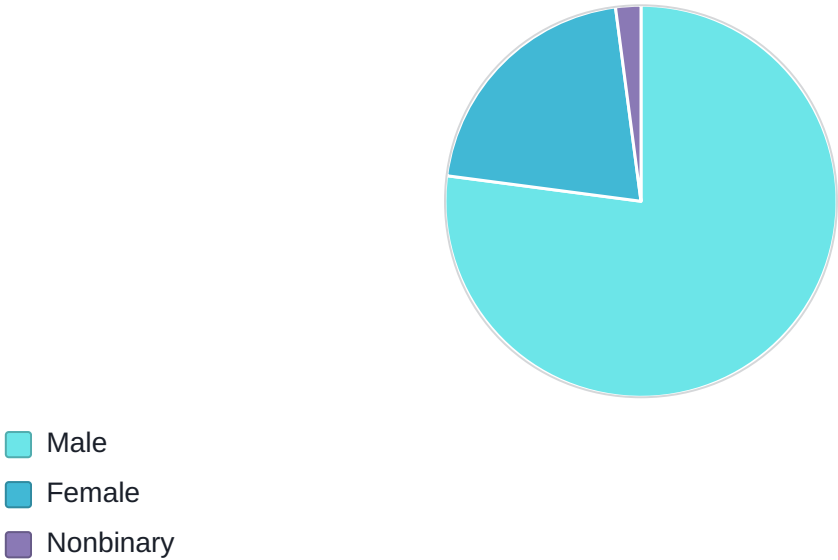

Relationship to the respondent

- Friend
- Neighbor, coworker, or other
- Other close family member
- Spouse or intimate partner
- Parent or stepparent
- Child or stepchild

Relationship (other-directed violence)

Category	Percent of persons at perceived risk
Friend	32%
Neighbor, coworker, or other	25%
Other close family member	22%
Spouse or intimate partner	7%
Parent or stepparent	6%
Child or stepchild	6%

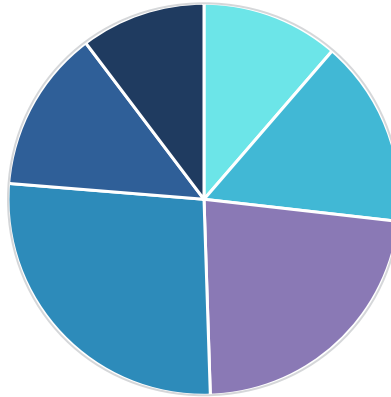

Sex or gender

Sex or gender (other-directed violence)

Category	Percent of persons at perceived risk
Male	74%
Female	20%
Nonbinary *	2%

Age

- 0-19 years
- 20-29 years
- 30-39 years
- 40-49 years
- 50-59 years
- 60+ years

Age (other-directed violence)

Category	Percent of persons at perceived risk
0-19 years	11%
20-29 years	15%
30-39 years	22%
40-49 years	26%
50-59 years	13%
60+ years	10%

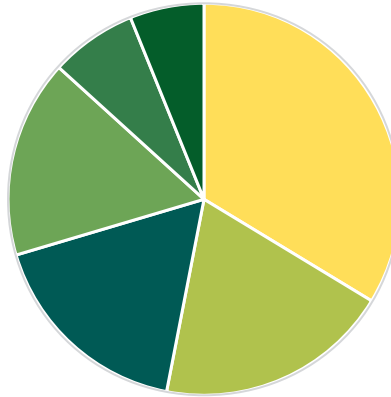

Persons at perceived risk of self-directed violence

How respondents described the person they were worried about.

33% friends

47% male

28% are 20-29 years old

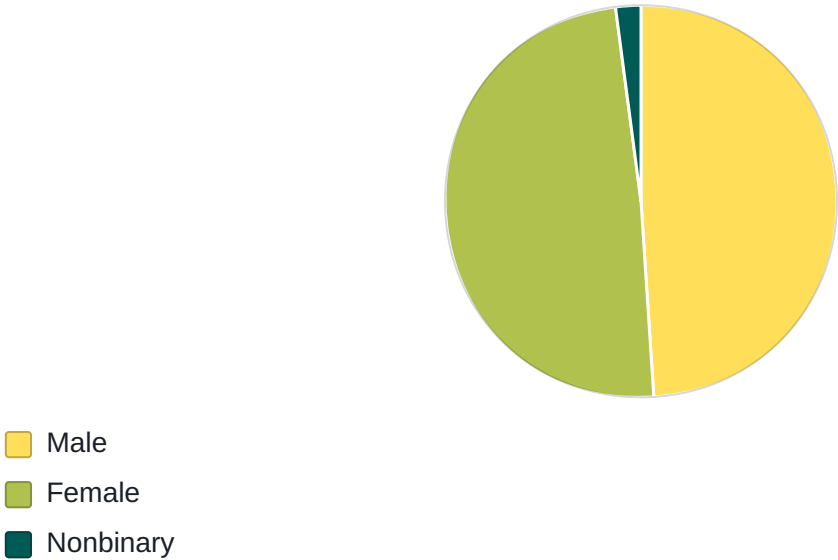

Relationship to the respondent

- Friend
- Other close family member
- Neighbor, coworker, or other
- Child or stepchild
- Spouse or intimate partner
- Parent or stepparent

Relationship (self-directed violence)

Category	Percent of persons at perceived risk
Friend	33%
Other close family member	19%
Neighbor, coworker, or other	17%
Child or stepchild	16%
Spouse or intimate partner	7%
Parent or stepparent	6%

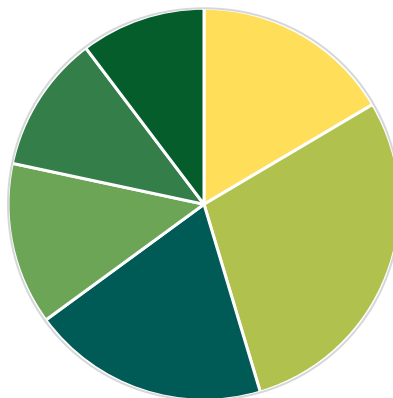

Sex or gender

Sex or gender (self-directed violence)

Category	Percent of persons at perceived risk
Male	47%
Female	47%
Nonbinary *	2%

Age

0-19 years

20-29 years

30-39 years

40-49 years

50-59 years

60+ years

Age (self-directed violence)

Category	Percent of persons at perceived risk
0-19 years	16%
20-29 years	28%
30-39 years	19%
40-49 years	13%
50-59 years	11%
60+ years	10%

* Nonbinary includes any gender other than "male" or "female."

Note: Percentages may not sum to 100% due to rounding and non-responses.

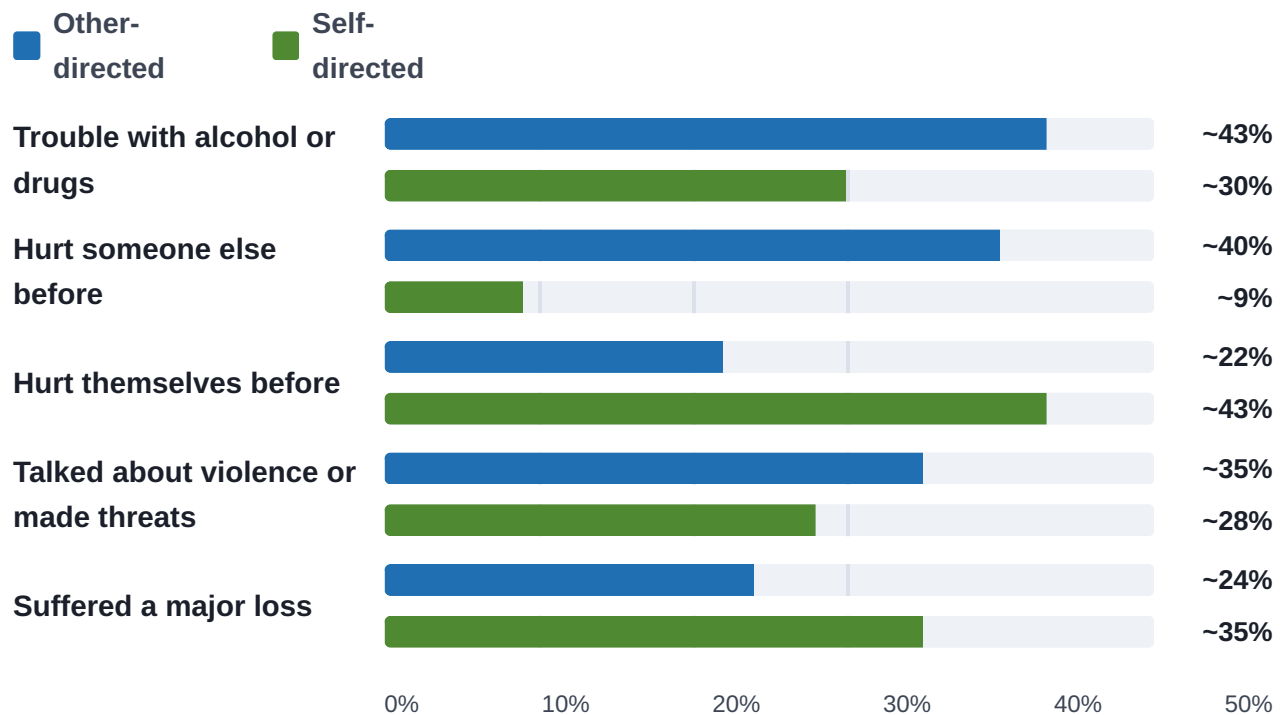

Likelihood of harm in the next year

27% of respondents said it was likely or very likely the person will hurt another person in the next year.

22% of respondents said it was likely or very likely the person will hurt themselves in the next year.

Why respondents were concerned

Respondents were concerned about violence because the person has...

Respondents were concerned about violence because the person has...

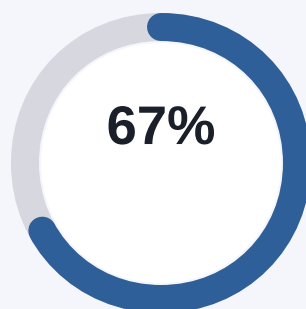

Reason	Other-directed violence (approximate)	Self-directed violence (approximate)
Trouble with alcohol or drugs	~43%	~30%
Hurt someone else before	~40%	~9%
Hurt themselves before	~22%	~43%
Talked about violence or made threats	~35%	~28%
Suffered a major loss	~24%	~35%

Note: The original chart plots these bars on a 0%-50% axis but prints no numeric data labels. The percentages shown here are approximate values read off that axis (rounded to the nearest few percent), not exact figures. For the exact data, see [the peer-reviewed source study \(DOI 10.1016/j.jypmed.2023.107421\)](https://doi.org/10.1016/j.jypmed.2023.107421).

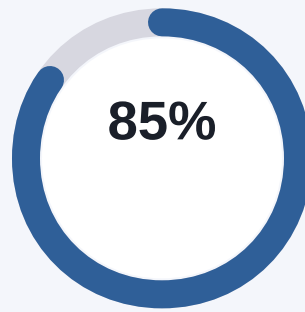

Access to firearms

1 in 5 persons at perceived risk to others and 1 in 10 persons at perceived risk to themselves have access to firearms.

Actions taken to reduce risk

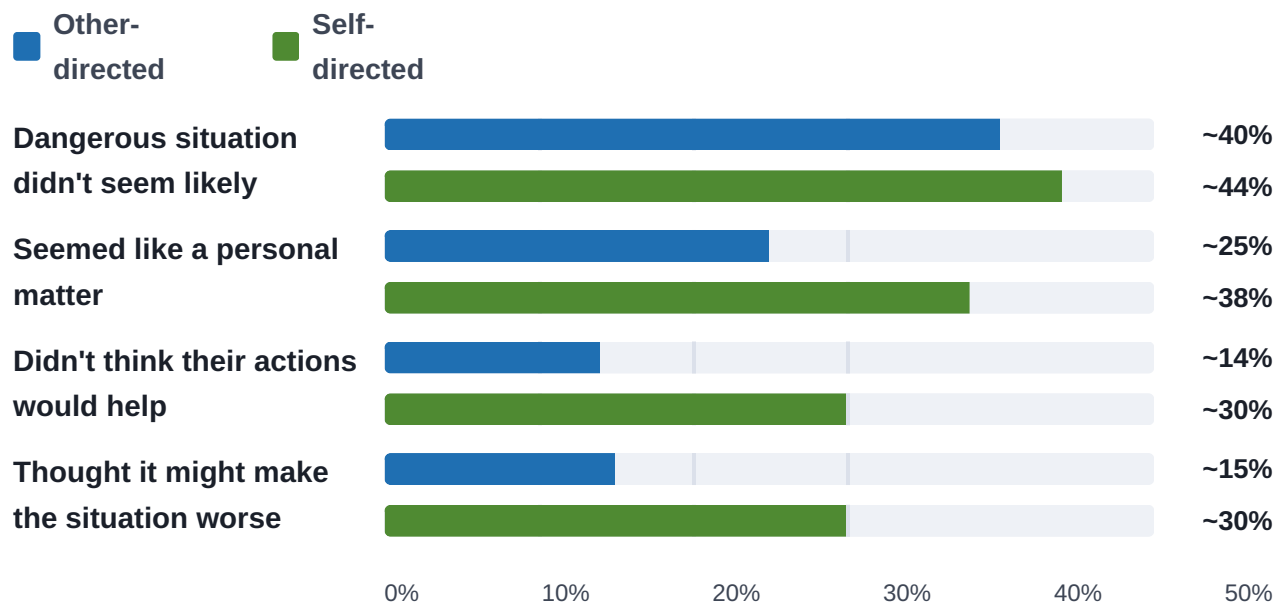

of respondents who knew someone at perceived risk of other-directed violence took one or more actions to reduce their own risk of being hurt by the person.

of respondents who knew someone at perceived risk of self-directed violence took one or more actions to reduce the risk of the person hurting themselves.

Why some respondents did not take action

Some respondents didn't take action because...

Some respondents didn't take action because...

Reason	Other-directed violence (approximate)	Self-directed violence (approximate)
Dangerous situation didn't seem likely	~40%	~44%
Seemed like a personal matter	~25%	~38%
Didn't think their actions would help	~14%	~30%
Thought it might make the situation worse	~15%	~30%

Note: The original chart plots these bars on a 0%-50% axis but prints no numeric data labels. The percentages shown here are approximate values read off that axis (rounded to the nearest few percent), not exact figures. For the exact data, see [the peer-reviewed source study \(DOI 10.1016/j.ypmed.2023.107421\)](https://doi.org/10.1016/j.ypmed.2023.107421).

What we learned

- An estimated 6.5 million Californians -- 1 in 5 adults -- are concerned someone they know, usually a friend or family member, is at risk of violence to others or themselves.
- The ability to identify when someone is behaving dangerously or exhibiting warning signs is an important component of violence prevention efforts.
- Access to firearms is common among persons at perceived risk of violence, though taking action to reduce this access was rare.
- Continued efforts to empower the public, especially those close to people at elevated risk, to act on their knowledge about risk factors for violence are needed.

About the survey

The California Safety and Wellbeing Survey (CSaWS) is an ongoing, statewide, probability-based Internet survey developed by the California Firearm Violence Research Center and administered by the research firm Ipsos. CSaWS asks questions on a wide range of topics related to firearm ownership and exposure to violence and its

consequences. More than 2,500 California adults participate in CSaWS at each wave, and their answers are weighted to be statistically representative of the adult population of the state. The 2020 wave of CSaWS was administered from July 14-27, 2020, with funding from the State of California.

About this accessible edition

This is a faithful, accessible (WCAG 2.1 AA) digital re-creation of a two-page infographic published by the California Firearm Violence Research Center at UC Davis Health. All survey figures are transcribed exactly as printed in the original. The two reasons-related bar charts in the original carry no printed data labels, so their values are given here as approximate percentages read from the chart's 0%-50% axis and are clearly marked as approximate; the peer-reviewed source study is linked for anyone who wants to verify the exact figures. This edition is not affiliated with or endorsed by UC Davis.

If you or someone you know is in crisis, call or text 988 (the U.S. Suicide and Crisis Lifeline), available 24/7. In an emergency, call 911. This crisis resource is added by this accessible edition and was not part of the original infographic.
